Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Human blood coagulation factor VII activating protease mutant.

Human; blood coagulation factor VII activating protease; FSAP; single-chain plasminogen activator; bleeding disorder; haematological; haemostatic; mutant; mutein.

Weimer T, Becker M; Roemisch J, Stoehr H, Feussner A, Lang W, Nerlich C, Muth-Naumann G; New nucleic acid encoding mutant factor 7 activating protease, useful for diagnosis, treatment and prevention of coagulation disorders, also related protein and antibodies.

Disclosure; Page 20-22; 27pp; German.

The present invention relates to a mutant of the DNA sequence encoding the protease (FSAP) that activates blood coagulation factor VII (FVII) and single-chain plasminogen activator, where at least one of the base changes G to C at nucleotide 1177 and G to A at nucleotide 1601 is present. The mutant sequences can be used in the treatment and prevention of bleeding disorders associated with inherited or acquired defects of

AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; heptotropic; vulnerary; antipsoriatic; antiparkinsonian; noctropic; neuroprotective; osteopathic; antipsoriatic; antiparkinsonian; noctropic; neuroprotective; osteopathic; cardiant; thrombolytic; coagulant; vasofropic; antibateic; hypotensive; dermatological; immunosuppressave; antiinflammatory; antibacterial; antifungal; antitheumanic; antibyroid; and antianaemic. The activiral; antifungal; antitheumanic; antibyroid; and antianaemic. The cogness on pe used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an OKFX associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, disorders, osteoarthritis, graft vs host disease, cardiovascular disease, (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune disorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, nocturnal haemoglobinuria, and as a contraceptive enhance coagulation; to inhibit thrombosis, and as a contraceptive
damage; cartilage damage; antiinflammatory disease; coagulation;

The mutant sequences can be used in the treatment and prevention of bleeding discreters associated with inherited or acquired defects of blood coagulation factors V, VIII, IX, X, XI, XII, von Willebrand's factor and/or with antibodies against any of these proteins. The present

The mature protein (AAR89196) has a mol. wt. of around 34 KD and is derived from the 96 KD precursor protein. The mature protein corresp. to residues 356-655 of the precursor protein. The inactive single chain form of the growth factor is activated by dimerisation of the mature protein. The active protein is a serine protease which can be used for the treatment of hepatitis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  345
